

HERBICIDE

GROUP Z HERBICIDE

Active Constituent: 240g/L METHIOLZOLIN

Poison Schedule: S5 (CAUTION)

APVMA Approval No: 87356

For the control of *Poa Annua* (wintergrass) in recreational turf

Pack Size:

500mL (20 x 500mL per carton)

Dangerous Goods Class:

3

DIRECTIONS FOR USE:

Restrains:

DO NOT apply by aircraft.

DO NOT apply by vertical sprayer.

DO NOT apply if heavy rains or storms are forecast within 3 days.

DO NOT irrigate to the point of runoff for at least 3 days after application.

DO NOT tank-mix with other herbicides, fungicides, insecticides and/or plant growth regulators.

DO NOT apply when summer air temperatures are consistently above 30°C or immediately following stressful (hot, dry) summer weather.

SPRAY DRIFT RESTRAINTS

Specific definitions for terms used in this section of the label can be found at apvma.gov.au/spraydrift

DO NOT allow bystanders to come into contact with the spray cloud.

DO NOT apply in a manner that may cause an unacceptable impact to native vegetation, agricultural crops, landscaped gardens and aquaculture production, or cause contamination of plant or livestock commodities, outside the application site from spray drift. The buffer zones in the buffer zone table below provide guidance but may not be sufficient in all situations. Wherever possible, correctly use application equipment designed to reduce spray drift and apply when the wind direction is away from these sensitive areas.

DO NOT apply unless the wind speed is between 3 and 20 kilometres per hour at the application site during the time of application.

DO NOT apply if there are hazardous surface temperature inversion conditions present at the application site during the time of application. Surface temperature inversion conditions exist most evenings one to two hours before sunset and persist until one to two hours after sunrise.

DO NOT apply by a boom sprayer unless the following requirements are met:

- Spray droplets are not smaller than a VERY COARSE spray droplet size category
- Minimum distances between the application site and downwind sensitive areas are observed (see the table titled 'Buffer zones for boom sprayers in the 'Mandatory buffer zones' section below).

Buffer zones for boom sprayers.		
Application rate	Boom height above the target canopy	Mandatory downwind buffer zones Natural aquatic areas
Up to 40 mL product/100 m ² or lower	0.5 m or lower	30 metres
	1.0m or lower	55 metres

CROP and SITUATION	PEST	RATE	CRITICAL COMMENTS
Putting greens Bowling greens Fairways and Tees and surrounding areas. Playing fields	Winter grass (<i>Poa annua</i>)	20-40 mL/100m ²	Apply up to 4 applications at 2-3 week intervals. Application is best made during autumn or spring when turf is actively growing. Apply using backpack or ground boom sprayer. Irrigate with approximately 10mm of water immediately following application (as methiozolin is absorbed by grass roots), ensuring no runoff occurs from the turf surface. NOTE: Some phytotoxicity and/or decrease in turf quality may occur when applied repeatedly at a high rate, particularly in sensitive species such as Creeping Red Fescue (<i>Festuca rubra</i>) and Colonial Bentgrass (<i>Agrostis capillaris</i> [=tenuis]). If this occurs, avoid reapplying until turf quality has fully recovered.
NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION DO NOT GRAZE TREATED TURF OR LAWN, OR FEED TURF OR LAWN CLIPPINGS FROM ANY TREATED AREA TO POULTRY OR LIVESTOCK.			

GENERAL INSTRUCTIONS

Half fill the spray tank with water before adding product.

PoaCure is a pre- and post-emergence herbicide that will selectively control winter grass (*Poa annua*) in various established golf course turf including bent grass putting greens, fairways, and other turf areas consisting of various cool and warm season turfgrasses. PoaCure is an isoxazoline class of chemical exhibiting a new mode of action associated with cell wall metabolism, unlike any other existing herbicide mechanisms.

PoaCure is a very slow acting herbicide, exhibiting herbicidal activity via plant cell wall biosynthesis inhibition. The typical herbicidal symptom is stunting in susceptible grasses. Poa growth is stopped within a day, but it is difficult to recognize in golf course environments where low mowing is regularly practiced. There are almost no visual symptoms such as yellowing, whitening, burning, or twisting in the first 2 weeks. Stunting becomes visually obvious 2 to 3 weeks after application, followed by slow desiccation of the entire plant starting from the meristematic tissue. Poa responses become clear in about 1 month, including an off-coloured to slightly brownish tint and sunken appearance. Usually, Poa fades away in the second month. This process typically happens faster during autumn applications or when temperature declines; and may be slower during spring applications or when it warms up.

Apply PoaCure using a wide range of spray volumes from 280 to 1800 litres per hectare. Do not tank mix with an adjuvant.

Apply PoaCure when the average daily temperature is between 10° and 26°C, when both Poa weeds and turfgrasses are actively growing.

Do not apply PoaCure prior to or during periods of heat stress and winter dormancy, or to turf that is stressed by management activities such as core cultivation, scalping, or top dressing.

PoaCure activity is most efficient when used in repeated applications in 2- to 3-week- intervals. Apply PoaCure using conventional ground application equipment. Shade, saturated soil conditions, or extended rainfall during/after treatment: Unfavourable bentgrass responses are expected to be greater under these conditions.

Do not apply, or if you have applied and observe any sign of thinning in these areas, skip an application until your turf grass is fully recovered.

Summer to early autumn application: Do not apply when summer air temperatures are consistently above 30°C or immediately following stressful summer weather. Allow at least a month for the turfgrass to fully recover in cool weather before starting applications.

Late autumn to winter application: Do not apply when consistent freezing temperatures are expected. Application may still be made when occasional frosts occur in the morning. Post-application aerification: Do not aerate within a week after application. Immediate postapplication aeration will destroy the herbicide treatment layer on the soil surface and Poa control efficacy will decrease.

Plant Growth Regulators (PGRs): During application sequences of PoaCure, stop using any PGR, except for Trinexapac-ethyl, until Poa control is completed. PGRs may negatively impact turfgrass health, and are generally antagonistic to PoaCure action.

COMPATIBILITY

Do not tank-mix with any other products.

RESISTANCE WARNING

GROUP	Z	HERBICIDE
--------------	----------	------------------

PoaCure Turf Herbicide is a member of the unknown group of herbicides. The product has unknown mode of action. For weed resistance management, the product is a Group Z herbicide. Some naturally occurring weed biotypes resistant to the product and other Group Z herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by this product or other Group Z herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, Colin Campbell (Chemicals) Pty Ltd accepts no liability for any losses that may result from the failure of this product to control resistant weeds.

PRECAUTIONS

Do not allow entry into treated areas until spray has dried. If prior entry is necessary wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Toxic to aquatic life. DO NOT contaminate wetlands or watercourses with this product or used containers.

PROTECTION OF HONEY BEES AND OTHER INSECT POLLINATORS

Harmful to bees, including bee brood. DO NOT allow spray drift to flowering plants in the vicinity of the treatment area. Before spraying, notify beekeepers to move hives to a safe location with an untreated source of nectar and pollen, if there is potential for managed hives to be affected by the spray or spray drift.

INTEGRATED PEST MANAGEMENT

Toxic to beneficial arthropods. Not compatible with integrated pest management (IPM) programs utilising beneficial arthropods. Minimise spray drift to reduce harmful effects on beneficial arthropods adjacent to the treatment area.

STORAGE AND DISPOSAL

Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Triple-rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit

specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product.

SAFETY DIRECTIONS

May irritate skin and eyes. Avoid contact with eyes and skin. Do not inhale spray mist. When preparing product for use and using the product, wear cotton overalls buttoned to the neck and wrist (or equivalent clothing), elbow-length chemical resistant gloves and goggles or safety glasses. If product or spray in eyes, wash it out immediately with water. Wash hands after use. After each day's use, wash gloves, goggles or safety glasses and contaminated clothing.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126; New Zealand 0800 764 766.

SAFETY DATA SHEET

CONDITIONS OF SALE: Agricultural, horticultural and pastoral preparations in their application involve varying factors such as differing conditions, soil, climate and methods of application over which Colin Campbell (Chemicals) Pty Ltd (Company) does not have control. Whilst the Company believes that all goods sold by it are true to label and are effective and safe for the purpose indicated, the Company expressly excludes all conditions, guarantees and warranties, whether express, implied, statutory or otherwise, relating in any way to the goods and accepts no responsibility for any loss, harm or damage whatsoever suffered from the use of the goods for any purpose or purposes. Notwithstanding the foregoing, where any legislation implies any condition, guarantee or warranty (each, a Statutory Guarantee) and that legislation prohibits provisions excluding, restricting or modifying the application of, the exercise of a right conferred by or liability under such Statutory Guarantee, such Statutory Guarantee shall not be excluded. However the Company's liability for any breach of such Statutory Guarantee shall, if permitted by that legislation, be limited at the Company's option to the replacement of the goods or the supply of equivalent goods, or the payment of the cost of replacing the goods or of acquiring equivalent goods.
